# Outdoor Emergency Care

## Continuing Education Series

### OEC Enhancement Seminar

#### Injuries to the Hip, Pelvis, and Femur

The OEC Enhancement Seminar Series provides the OEC Technician an opportunity to improve and further their skills in a relaxed, non-evaluative, realistic environment that can be tailored to meet the needs of the individual, the organization, or the ski area.

This module is a focused session covering injuries to hip, pelvis, and femur and includes a classroom review and hands-on scenario-based practice.

- Define and describe the various bone, joint, and soft tissue injuries that one might expect to see associated with the hip, pelvis, or femur
- Describe the principles of splinting bone and joint injuries, including open fractures
- Demonstrate the principles of splinting hip/pelvic injuries, including the preferred method of lifting/moving this patient
- Demonstrate splinting and bandaging skills necessary to treat lower body injuries
- Describe transportation options for patients with such injuries, including positioning in a toboggan

**February 15, 2026**  
**9:00 AM to 4:00 PM**  
**Mad River Mountain**  
**Contact: Jim Vickroy**  
**937-553-1182 or [jim.vickroy@gmail.com](mailto:jim.vickroy@gmail.com)**

Patrollers must be in uniform and be prepared to work on the hill
